THE ALL-IN-ONE TECHNICAL PARTNER

Make room for what's next.

Connect the systems behind your business and the experiences your customers see.

ERP & OPERATIONS COMMUNICATIONS & CLOUD DIGITAL EXPERIENCES

BASED IN EGYPT. BUILT AROUND YOUR BUSINESS.

A connected way to build what comes next.

Nest Software Development brings business systems, digital experiences, communications, and infrastructure into one technical partnership.

Based in 6th of October City, Giza, we help organisations connect the work customers see with the systems that keep the promise. An enquiry, an order, a call, and an invoice belong to the same business story.

We begin with how your people work, define the gaps that matter, and turn them into a practical plan for implementation, adoption, and ongoing care.

Our mission

Make technology useful in the working day. Translate real operational needs into a clear scope, connected workflows, and a practical path to delivery.

Our vision

Give growing businesses room to move, with systems that support change and consider people, ownership, and maintenance from the start.

CLARITY BEFORE COMPLEXITY

CONNECTION WITH PURPOSE

OWNERSHIP BEYOND LAUNCH

SPECIALIST FOCUS. SHARED DIRECTION.

One partner.
A connected business.

Start with a focused need, or build a wider plan. Each Nest brand has a clear role within the same customer and operational journey.

BUSINESS OPERATIONS

OneSpace

ERP selection, implementation, integration, and support. Connect finance, sales, stock, and daily work.

BUSINESS COMMUNICATIONS

MiraVoice

Business calling designed around the caller journey, team availability, and accountable follow-up.

HOSTING & CONTINUITY

NestCloud

A managed home for business applications, with defined capacity, maintenance, backups, and recovery.

Connected by Nest Web development · Mobile applications · Digital marketing · Infrastructure

ONE SPACE ERP SYSTEMS

03 / ONESPACE ERP

Every team. One connected business.

An order should move your business forward, not start another round of calls and spreadsheets. OneSpace connects finance, sales, stock, and daily operations around a shared way of working.

Start with the workflow

Map a representative transaction and its exceptions. Agree the teams, approvals, data, and reports needed to move it from enquiry to collection.

Shape the right system

ERPNext is a core implementation route. Platform selection can also consider Odoo or Oracle requirements, with licensing, fit, and ownership assessed explicitly.

Make change usable

Prepare and validate data, rehearse real tasks with users, and plan cutover and stabilisation. Support and improvement priorities follow the way the system is used.

THE BUSINESS VALUE A shared operational picture, clearer handovers, and records that can be traced back to the work.

CONNECTED RECORDS. PRACTICAL CONTROL.

Build from a reliable foundation.

OneSpace shapes the ERP scope around the processes you need today and the connections you will need next.

01

Finance & accounting

Invoices, payments, receivables, payables, cost centres, and reporting.

02

Sales & purchasing

Customer and supplier records, quotations, orders, receipts, and approvals.

03

Stock & warehouses

Item data, transfers, deliveries, valuation, and batch or serial workflows.

04

Manufacturing

Bills of materials, work orders, material movements, and quality checks.

05

Projects & services

Tasks, time, expenses, project costs, and agreed billing workflows.

06

People & assets

Scope Frappe HR separately; connect asset records and maintenance needs.

Extend with a reason. Websites, specialist applications, and Egyptian e-invoicing can be assessed as scoped integrations. Installed applications, compatibility, custom work, and local requirements are confirmed during discovery.

05 / MIRAVOICE

Every call has somewhere better to go.

Connect callers with the right people and give your team a consistent business phone experience, from the first ring to the follow-up.

Design the caller journey

Map working hours, language choices, departments, queues, and overflow routes. Make the next step clear when someone is busy or unavailable.

Equip the team

Assess office and remote calling through compatible phones or clients. Network readiness, devices, and carrier requirements shape the rollout.

Make follow-up accountable

Agree call reports, recording permissions where required, storage, and retention. Test routing with users and provide a documented handover.

THE BUSINESS VALUE A clearer path to the right team and better visibility into how business calls are handled.

NestCloud
YOUR CLOUD . YOUR NEST

06 / NESTCLOUD

Room to grow. A plan to recover.

Give websites, applications, and business systems a cloud home with clear capacity, maintenance, backup, and support responsibilities.

Size around the workload

Review users, storage, integrations, and expected peaks. Define resources, access, and responsibility boundaries before migration.

Move with a plan

Inventory dependencies, test the destination, and agree a cutover window. Verify applications and data with a rollback route in place.

Operate beyond launch

Assign ownership for monitoring, updates, backups, and restore checks. Review capacity as usage changes; agree service coverage and recovery objectives.

THE BUSINESS VALUE An understood hosting environment with a migration plan and clearly assigned operational responsibilities.

07 / WEB DEVELOPMENT

A better experience. From the first click.

Your website starts a conversation. Your application helps someone finish a job. We design and build both around the people using them and the business behind them.

Structure the story

Map audience journeys, page structure, and content priorities. Shape responsive interfaces and clear navigation around the most important actions.

Connect the useful parts

Build websites, portals, commerce experiences, and internal tools. Define data movement and error handling for any ERP or service integrations.

Launch, then learn

Test agreed browser and mobile journeys, accessibility, and forms. Prepare search-friendly structure, analytics, handover, and maintenance scope.

THE BUSINESS VALUE A digital experience that explains your offer, supports useful tasks, and gives enquiries a clear next step.

08 / MOBILE APPLICATIONS

Make the important task feel simple.

From a customer placing an order to a colleague working in the field, build a mobile experience around the moment it earns its place.

Focus the first release

Map the core journey and test a prototype. Choose native or cross-platform development around device needs, experience, budget, and maintenance.

Plan for real conditions

Design sign-in, permissions, interruptions, and recovery states. Where offline work is required, define what stays available and how changes reconcile.

Prepare the next release

Test agreed devices, prepare store submissions, and plan monitoring and updates. Store approval remains subject to each platform's review.

THE BUSINESS VALUE A focused application users can learn quickly, with a defined connection to your business systems.

09 / DIGITAL MARKETING

Be understood. Then be chosen.

Bring positioning, content, campaigns, and your website into one customer journey. Build attention around a clear offer and measure the actions that matter.

Find the message

Review your offer, audience questions, channels, and competition. Agree campaign objectives and what counts as a useful enquiry or conversion.

Create a recognisable presence

Connect copy, graphics, motion, social content, and landing pages through one creative direction and a practical approval calendar.

Learn from the response

Review enquiry quality, conversion paths, and campaign costs. Prioritise search content and technical foundations, then test the next improvement.

THE BUSINESS VALUE A consistent message and creative work connected to an understandable demand-generation plan.

10 / INFRASTRUCTURE

A dependable foundation for everyday work.

Connect offices, systems, and people with infrastructure designed around how work happens and what the business needs when something goes wrong.

Understand dependencies

Review locations, users, devices, applications, and connectivity. Identify the systems and access paths that daily work depends on.

Design the connections

Plan networks, access boundaries, and remote connectivity around agreed requirements. Document equipment, configuration, and operational ownership.

Prepare for recovery

Include monitoring, escalation, configuration backups, and restoration checks in the design. Define maintenance schedules and support coverage.

THE BUSINESS VALUE A documented technical foundation that makes connectivity, access, and recovery easier to manage.

START WITH THE WORK THAT MAKES YOU DIFFERENT.

Your operation gives us the brief.

Industry patterns make discovery concrete. Your processes, exceptions, data, and people determine the final scope.

Trading & distribution

Connect catalogues, purchasing, warehouses, deliveries, and collections.

Manufacturing

Bring demand, materials, production activity, and costing into view.

Retail & e-commerce

Define how products, orders, stock, returns, and payments move across channels.

Projects & professional services

Link estimates, tasks, time, expenses, and billing to the work delivered.

Construction & contracting

Organise site purchasing and project costs; assess specialist contract workflows.

Education & healthcare operations

Assess administration, finance, stock, and assets alongside specialist applications.

These are workflow starting points, not claims of prebuilt solutions or completed projects in every sector. Specialist applications and integrations are assessed separately.

SOME OF THE CLIENTS WE WORK WITH

Different businesses.
A shared drive to move forward.

A selection of client brands featured across the Nest website.

- Cheops Privé
- C-Water
- Josoor
- Kayan
- Mustela
- NexifyMD
- Sigma AO
- ZAD
- Trending
- Bioderma
- Ducray
- Nuxe

FROM A BUSINESS QUESTION TO A WORKING SYSTEM.

Clear steps. Shared ownership.

01

Discover

Understand the business problem, representative workflows, users, and constraints.

A shared brief and priority list.

02

Define

Agree architecture, responsibilities, deliverables, dependencies, and acceptance criteria.

A practical scope and phased plan.

03

Build & validate

Configure, develop, integrate, and test with the people who will use the result.

Evidence that key journeys work.

04

Launch & improve

Prepare cutover, train users, document ownership, and agree support and review priorities.

A supported transition and next-step backlog.

What we bring

Technical discovery, a connected view of the work, explicit delivery boundaries, testing, and a documented handover.

What we build together

Clear process ownership, timely decisions, usable data, user participation, and an agreed definition of success.

LET'S START WITH YOUR BUSINESS.

What would you like to work better?

An operational bottleneck. A disconnected customer journey.
A system that needs to grow with you.

Bring us the starting point. We will help define the next step.
